

WANT PEAK PERFORMANCE? FEED PERFORMANCE PROBIOTICS

HOW PERFORMANCE WORKS:

The Host-Specific bacteria and yeast in the products have been selected from a pool of naturally occurring (non-GMO) bacteria and yeast for their ability to positively affect digestion, health, and the restoration of beneficial intestinal microflora. These specifically selected bacteria and yeast synergistically react to inhibit the growth of pathogenic bacteria.

Fawns are born with a non-functioning rumen and a sterile gut. The selected bacteria in Performance Probiotics colonize in the fawn's gut, thereby jumpstarting the fawn's digestive system. Some of the bacteria not only colonize in the fawn's gut but, with competitive exclusion, prevent pathogenic bacteria from adhering to the wall of the intestine.

Several other health challenges affect newborn fawns. Our Double Shot Fawn Gel is designed to naturally combat those challenges. It includes specific antibodies to match specific pathogens. These antibodies provide a safe, natural, non-toxic support to fight off the toughest pathogens. Additionally, Double Shot contains a unique charcoal and organic acid based product proven to be effective in promoting healthy gut conditions in young ruminants. Bacteria, antibodies and the organic acid based product are carefully blended to provide the best all natural product on the market for newborn fawns.

Healthy Fawn is a supplement designed to be added to water or milk replacer for fawns that are bottle-fed. It is formulated to provide rumen-specific bacteria to the fawns, which serves to promote good health and to develop the rumen. In addition to bacteria and yeast, Healthy Fawn includes numerous vitamins and trace minerals which give the fawns the extra boost they need.

Our fawn program is designed to naturally promote good health and growth to your fawns.

Performance Probiotics, LLC is dedicated to providing the highest quality Direct-Fed Microbial product line available worldwide. We are committed to continue to invest in research and scientific studies so we can stay on the leading edge of product development.

All our products include live naturally occurring bacteria. None of our products contains antibiotics or hormones. None of our bacteria are genetically modified. Each particular strain of the bacteria has been chosen for specific reasons. They are microscopically enclosed in a natural substance to ensure a targeted delivery system for your animal, as well as to maintain their stability and strength. Each product is further enhanced to meet certain challenges of the fawn and deer.

We sell products around the world and welcome the opportunity to tell you more about our deer products as well as our other product lines.

Performance is distributed and guaranteed by

DOUBLE SHOT FAWN GEL

- 300 Million CFUs of Live Bacteria per application
- Specific Antibodies target seven Specific Pathogens
- Charcoal and an Organic Acid ingredient promote a healthy gut while neutralizing pathogens
- Targeted delivery with encapsulated bacteria
- Five strains of bacteria to inoculate the animal's gut
- Strengthens the immune system
- Appealing taste and smell
- Dial-a-dose syringe aids in delivery

WHAT MAKES US DIFFERENT?

LIVE BACTERIA - Beneficial bacteria are required for healthy digestion. Pathogenic or bad, bacteria cause digestive problems. We include specific strains of particular bacteria so they colonize, adhere and reproduce in the gut. These beneficial bacteria out compete pathogenic bacteria that are then shed and flushed through the digestive system.

YEAST - Live yeast culture is used to enhance digestion. As a live yeast culture, the yeast reproduces rapidly aiding in digestion and serving as additional nutrients for the bacteria and the digestive system.

MICRO-ENCAPSULATED - After fermentation, the live bacteria are freeze dried and encapsulated with a natural substance. The primary function of this microscopic coating is to ensure targeted delivery of the bacteria. An additional benefit of this process is to improve product stability. While we recommend that you keep the products out of direct sunlight and avoid high temperatures; there is no special requirement that they be refrigerated or kept airtight.

DOUBLE SHOT GEL - Double Shot has been specifically formulated for newborn fawns. Fawns are born with a sterile gut (no bacteria) and are subject to several diseases. Double Shot contains 300 Million CFUs of bacteria per dose to populate the fawn's gut with beneficial bacteria promoting a healthy fawn. Also included in Double Shot are hyper-immunized eggs that produce specific antibodies for combating seven diseases. Finally, we include a charcoal and organic acid substance that promotes a healthy gut while neutralizing difficult pathogens. All of this protection is contained in one simple to administer product.

HEALTHY FAWN - Healthy Fawn is a water soluble supplement that should be added to water or milk replacer. Healthy Fawn is a combination of five strains of live bacteria, active dry yeast and a number of vitamins and minerals that fawns need to grow. In addition to the overall general health benefits breeders notice an increase in weight gain, as compared to fawns that are not fed the supplement.

HEALTHY FAWN

- Provides over 100 Million CFU's of Lactic acid producing bacteria per feeding
- Feeding live beneficial bacteria helps colonize the fawn's gut with healthy bacteria which competitively excludes pathogenic bacteria
- Helps regulate the digestive system and minimize scours
- All natural, no antibiotics
- Water soluble – mixes completely with water or milk replacer
- Active dry yeast provides “food” for the bacteria and aids in rumination as the rumen develops
- Vitamins and trace minerals optimize the growth and health of the developing fawn
- Palatable taste and mixes easily
